Additional Notes or Screen Shots

The Overhead Door Model 596 Sectional Door specified will not match either Elevation OH or OH-1 on A7.01 in respect to a fully framed door with vision and insulated panel sections. The framed vision panel sections can be provided, but the insulated panel sections would be a solid panel without the frame depicted on the sectional door elevations. Also, the vision panel frames can be factory powder-coated 'red' as noted on the Door Schedule / A7.01, but the insulated panel sections would need to be field-painted because the factory cannot powder-coat insulated panel sections. The factory could provide a standard finish, (white), and the panels would need to be field-painted to the specified color, (red).

If the Sectional Door elevations on A7.01 are the desired door & frame style, you may need to consider Overhead Door Model 521. See attached product data. The frames & insulated panels on this model of door could be factory powder-coated 'red' as specified. There would be a difference in the R-Value of the insulated panel section on this door due to the difference in thickness of the insulated panels on Model 521 versus those on Model 596.

Other questions to consider:

- 1.Standard Manufacturer's 2" track specified. Suggest going to a heavy-duty 3" track based on the minimum number of operation cycles specified, (100,000 minimum).
- 2. Suggest insulating the stiles and rails on the door frames for better R-Value.

SECTIONAL DOOR ELEVATIONS ON SHEET A7.01 ARE THE DESIRED DOOR AND FRAME STYLE. THE USE OF OVERHEAD DOOR MODEL 521 PER OUR CODE AND ENERGY ANALYSIS FAILS THE OVERALL COMCHECK (SHEET G1.00). OH DOORS NEED TO BE AT LEAST R-17 OR BETTER.

THOUGH, IF OVERHEAD DOOR MODEL 596 IS THE ONLY OPTION THAT WE COULD USE TO ACHIEVE R-VALUE WE ARE INTENDING, WE ARE FINE GOING WITH THIS MODEL. VISION PANEL FRAMES TO BE POWDER-COATED "RED" AND WE WILL FIELD PAINT THE INSULATED PANEL SECTIONS

PLEASE USE 3" TRACK.
